# Types of installation

Sinks are essential pieces in your kitchen and when incorporated into your workbench they become an integral part of a workspace where the functionality matches the unique design of the brand.

All the elements that make Rodi sinks so unique are the result of an intense work that has the fundamental goal to ally the exclusive design to the ease of use.

**OVERMOUNT**

Installed above the countertop, into a prepared cut-out plan, the sink sits on the top of the worktop.

**INTEGRATED**

The sink is integrated flush in the worktop into a prepared cut-out plan, creating a single and smooth unit.

**INSET**

Installed above the countertop, into a prepared cut-out plan, this is one of the most conventional types of installation, where a small profiled edge appears on the worktop.

**UNDERMOUNT**

Installed below the countertop, into a prepared cut-out plan, this type of installation features a functional extension and an easy-to-clean workspace area.

# Materials & finishings

The best solutions are made with the best materials.

Following the guidelines of modern design, versatility, functionality, and ergonomics, our options create a set of accessories specially designed to complete our sinks, in order to create the ideal solution for your kitchen.

## STEEL FINISHES

RODI uses solely premium quality AISI 304 18/10 stainless steel for its entire kitchen sinks range.

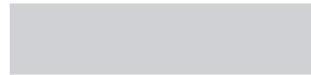

### BRUSHED

Superior finishing used in all RODI ELITE.

### POLISHED

This finishing is used in RODI SELECTION and RODI LIGHT. Finition standard, type brilliant.

### NOT POLISHED

This finishing is used in OKIO LNE, SIT-ON and SINGLE BOWLS. Finition standard, type not brilliant.

## PVD

PVD (Physical Vapor Deposition) is a thin high adhesion ceramic coating with a superior hardness, high resistance to oxidation, chemically inert and biocompatible.

### PVD COPPER

Ceramic coating in copper color.

### PVD GREY

Ceramic coating in grey color.

# Cleaning and maintenance

Stainless steel is a metal alloy, composed of two major elements which are chrome and nickel.

Chrome gives stainless steel its luster and durability while nickel provides hardness and strength.

For proper maintenance make sure to follow the correct procedures when taking care of your stainless steel sink.

### DON'T CUT

Do not cut directly on the kitchen sink surface.

Use a specific accessory.

### RINSE

Wash abundantly the kitchen sink after each use with water, mild soap or neutral detergent. Drying is extremely important. Use a smooth cloth to do so.

### LEAVE THE SINK EMPTY

Don't leave sponges, metallic objects, rubber mats, any abrasive materials or substances, cleaning detergents or acids (hydrochloric, sulphuric), nor food remains on the kitchen sink. Prolonged exposure to any of this can cause corrosion.

### TAKE CARE WITH WARM OBJECTS

Do not place warm objects such as pans or trays on the kitchen sink.

Playful  
Days
